## **DETAILED ACTION**

(1)

### ***Election/Restrictions***

Applicant's election without traverse of Group II, claims 19-29 and 34 in the reply filed on August 5, 2004 is acknowledged.

(2)

## **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

The Title of the Invention has been changed to read as follows:

"Methods for Making Composite Bonded Structures"

(3)

### ***Allowable Subject Matter***

Claims 19-29 and 34-41 have been found to be allowable over the prior art of record.

(4)

The following is an examiner's statement of reasons for allowance:

Methods for the formation of unitary composite (silicon carbide) composite bodies through the use of a key and key-way, such as taught by U.S. Patent No. 5,310,434 to Vives et al., are known in the art. The process of Vives et al., for example, comprises the steps of: (1) Providing a first and second preforms containing carbon (such as silicon carbide infiltrated carbon) to be joined into contact with one another such that a boundary zone is formed between the preforms; providing a key comprising a mechanical locking preform containing carbon; providing a keyway having a size and shape to as to engage the key; placing the key in the keyway across the boundary zone such that the key mechanically locks the first and second preforms relative to one another; providing an infiltrant material; and infiltrating the infiltrant material into the first and second preforms and key such that the infiltrant reacts with carbon making up the preforms and key such that a unitary composite body is formed. Although Vives

et al. disclose that the key (dowel) may be formed through the cutting of a composite body, neither they nor any of the prior art of record specifically teach or suggest such a method as set forth in applicant claims 19, 24 and 34 wherein the key is sufficiently self-bonded as to permit its being green machined. Likewise, none of the prior art of record specifically teaches or suggests the use of a key comprising a mechanical locking reaction-bonded silicon carbide body, as set forth in applicant claims 23 and 25 and one of ordinary skill in the art would not have been motivated to substitute such a material for the key (dowel) of Vives et al. motivated by the fact that Vives et al. relies on the spring-back nature of the 3D woven material making up the dowel to mechanically lock the preforms together prior to infiltration.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

(5)

***Response to Amendments and Arguments***

The amendments and arguments filed August 5, 2004 are acknowledged. In response to the amendments to applicant claims 19, 23, 24, 25 and 34, claims 19-22, 24 and 34-41 have been indicated as allowable over the prior art of record as set forth and explained in sections (2) and (3), above.

(6)

***Drawings***

The application having been allowed, formal drawings are required in response to this Office Action as the drawings filed on January 23, 2002 appear to be informal.
